## Why Should we Prepare?

COVID-19 has caused a stir across the globe, from changing the way we work to the way we shop and move around in public spaces.

The unprecedented lockdown across the UK has encouraged businesses to work remotely, making the most of digital communication and services.

With lockdown measures being relaxed, individuals will return to using public transport on a more regular basis, putting themselves and your staff at an increased risk.

Companies must now prepare for a new approach to working as the public's 'needs' and 'wants' have changed significantly over the past months.

Capital Power Clean offers a range of solutions to keep commuters and staff safe on transport systems, from trains, to planes, trams, buses and other vehicles.

# iClean Mini

The iClean mini™ turns tap water into a safe, effective cleaner and sanitiser stronger than bleach but without the hazardous odours, fumes and toxic residues associated with traditional cleaning chemicals, making it **harmless to the user and environment**.

With the press of a button, iClean Mini™'s diamond coated electrodes instantly create Aqueous Ozone, an oxidizing solution that is safe for people but tough on dirt, germs and odours. It can be used on numerous surfaces in all areas of transport from door handles to windows, replacing all-purpose cleaners, glass cleaners and so much more.

iClean Mini is small, simple to use and economical.

**CHARGE:** Simply charge for 1 hour and it will last for hundreds of sprays

**FILL:** Using cold water only, fill the product through the Quick-Release reservoir.

**SPRAY:** Finally, press the power button to release oxidising solution and it is ready to clean.

# Tersano Lotus Pro

The lotus® PRO High Capacity cleaning system turns ordinary tap water into Stabilised Aqueous Ozone (SAO), nature's most powerful cleaner. Designed for use on a large-scale, saving time, increasing efficiency and reducing environmental impact.

SAO is a highly effective cleaning agent that breaks down dirt, grease and other contaminants, safely replacing traditional chemical cleaners, deodorisers and sanitisers. It is extremely safe and poses no harm to the body if ingested or consumed.

Works in 3 easy steps:

## THE POWER OF SAO IN 3 SIMPLE STEPS

1. Inside the lotus® unit, oxygen from the air is safely turned into ozone then infused into ordinary tap water
2. Ozone is attracted to germs, soils and bacteria and quickly eliminates contaminants it comes in contact with
3. The lotus® PRO system works for hours, after which point it converts back into water and oxygen

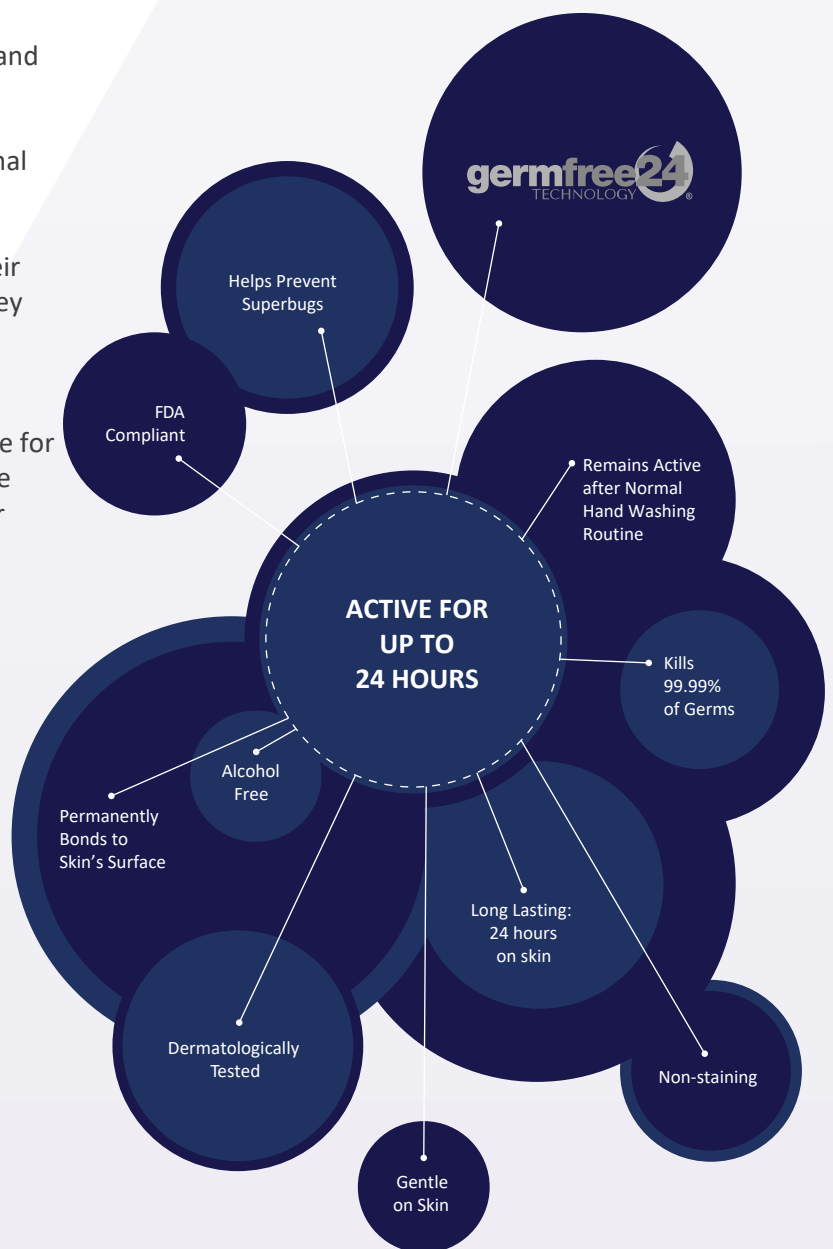

## Zoono

Zoono®'s z71 surface sanitiser kills germs and stays active on surfaces to provide all-day protection for up to 30 days.

Surfaces can be washed and dried as normal during the day without washing off the protective shield it creates.

Customers and staff can continue with their daily activities with peace-of-mind that they are protected.

Zoono is colourless, odourless, non-leaching, environmentally safe, non-corrosive and whilst completely gentle for humans and animals, it is deadly for a wide range of viruses, bacteria mould and other pathogens.

## i-mop lite

i-mop lite is a scrubber dryer with the flexibility of a mop. The smallest and lightest of the i-mop range, lite offers outstanding manoeuvrability to deal with tight corners between and below seating areas on transport. Extremely portable, lite is easily moved between vehicles or carriages and is also perfect for transporting between sites, as it fits in the boot of a car!

Featuring a new, improved control panel and new water overflow protection mechanism, everything is designed to make it even more user friendly.

i-mop's advanced suction technology means floors are no longer left wet and unsafe. Powerful twin counter-rotating 500 RPM brushes achieve optimum soil removal, proven by ATP test data to leave floors up to 90% cleaner.

By optimising the use of all chemicals and water, environmental impact is reduced by 75%.

## Motorscrubber range

**Motorscrubber M3** offers powerful, cordless scrubbing of solutions for highly efficient soil removal

**Motorscrubber JET** delivers the same scrubbing ability together with a backpack solution system to apply cleaning solution direct to the brush head. The JET is also compatible for use with the **Motorscrubber STORM** decontamination sprayer.

Floors can be easily dried with the addition of the **Motorscrubber Suction Kit** or the incredible **Motorscrubber BLADE** microfibre system, which also offers an excellent means of interim floor maintenance.

## Orbot SLiM

The Orbot SLiM is specifically made for use in small spaces, with the same orbital technology and robust features of our other industrial products.

Orbot SLiM will save you time, money and labour by using a machine that cleans all floor types. With a free-floating base and transport wheels, it has great manoeuvrability.

It has a thin light weight structure but is strong and capable of the powerful agitation that delivers superior results in all professional deep cleaning. Add-on features are available for this model, creating a custom model for personal and industrial needs.

## The Pac Vac Range

With a proven track record for reliability resulting from over 30 years of innovative design and development, Pacvac's performance is also matched by their comfort.

Because they are worn as a backpack, users can easily negotiate tight spaces between seating, etc. The ISSA has shown that Pacvac's backpack design results in up to **3 times the productivity of traditional tub vacuums!**

The **Superpro 700** series is fitted with a world standard ergonomically designed harness, HEPA rated Hypercone filtration and provides cleaners with an effortless and healthy cleaning experience.

With a 5 litre capacity to enable longer periods of uninterrupted cleaning, Superpro 700 is available in both mains operated and battery powered options.

**Pacvac Velo** is the latest addition to the Pacvac family. Battery powered, the Velo is smaller and lighter for even greater operator comfort and unrestricted movement. Despite its reduced size, Velo also features HEPA filtration and two years warranty on the body and motor as standard.

# Motorscrubber Storm

Developed in direct response to the Coronavirus (Covid-19) crisis, the brand new Motorscrubber Storm propels a fine mist which rains down to deliver fast and efficient surface coverage.

With a 68 micron swirl spray jet, Motorscrubber Storm is perfect for use with disinfectants and sanitisers to create a continuous liquid layer where large surface coverage is required for decontamination and infection control projects.

Compatible with Motorscrubber Jet backpacks, the Motorscrubber Storm is available as an accessory for your existing system, as a complete decontamination sprayer, or as a full package with Motorscrubber JET for scrubbing floors, stairs and other surfaces.

# ST • RM

BALLISTIC VIRUS KILLER

CORONAVIRUS HAS RULED FOR TOO LONG, ITS TIME TO STOP BEING REACTIVE AND **START BEING PROACTIVE WITH VIRUS CONTROL.**

M • TOR SCRUBBER

## Fimap E-Spray

The Fimap E-Spray is a professional electrostatic spray gun which distributes disinfectant solutions effectively and uniformly on surfaces.

Lightweight and very comfortable to use, E-Spray is powered by a lithium battery that allows several hours of sanitising, without the restrictions or hazards of a mains cable.

The very fine, electrostatically-charged mist is attracted to surfaces with a “wrap-around” effect, reaching every point of the area to be treated. The settling solution droplets create a sanitising coating on surfaces.

E-Spray significantly reduces labour associated with disinfection, particularly in areas that are difficult to disinfect properly

Please contact us for further information and advice, and our sales team will be more than happy to help.
