

LINDHAUS LW 46 HYBRID SCRUBBER DRYER

Experience the freedom of battery-powered cleaning with the option to plug into mains for non-stop operation!

The LW 46 offers wall-to-wall cleaning with up to 1500m²/h working capacity and is light and easy to use, despite its size.

The frame adjusts to an angle of 160° for easy access below tables and furniture and folds down for transporting in vehicles.

The cleverly designed suction nozzle turns in the opposite direction to the machine to collect all waste water, even on turns.

Both the brush and squeegee are easily removed without any need for tools, and the solution tank includes a solution measurement system.

The recovery system is protected by a float system to prevent overfilling and all filters are treated to eliminate bacteria, fungi and dust mites.

Once the battery has been discharged, simply switch to mains power or plug in to recharge using the on-board charger, with a recharge time of just 3 hours.
